
Assignment 3

Bolatbekov Nurzhas CS-2424

Part 2. CREATE GROUPS. ORGINIZE USERS INTO DIFFERENT GROUPS.

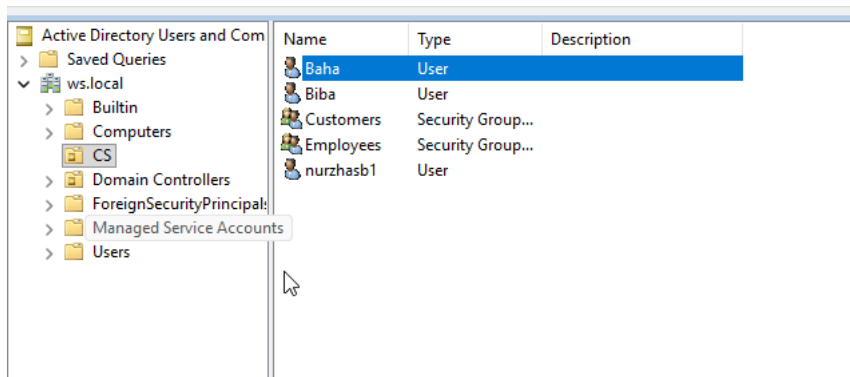

First I created 2 groups Employees and Customers

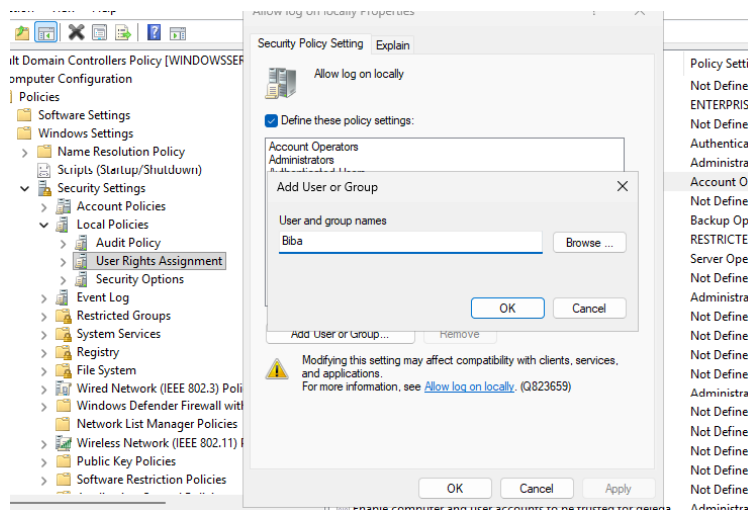

What is the difference between Domain local, Global and University Group scopes, and Security and Distribution Group types?

Domain Local is used for assigning permissions to resources, Global is used to organize users within one domain, and Universal is used across multiple domains. Security groups are used for permissions, while Distribution groups are only used for email.

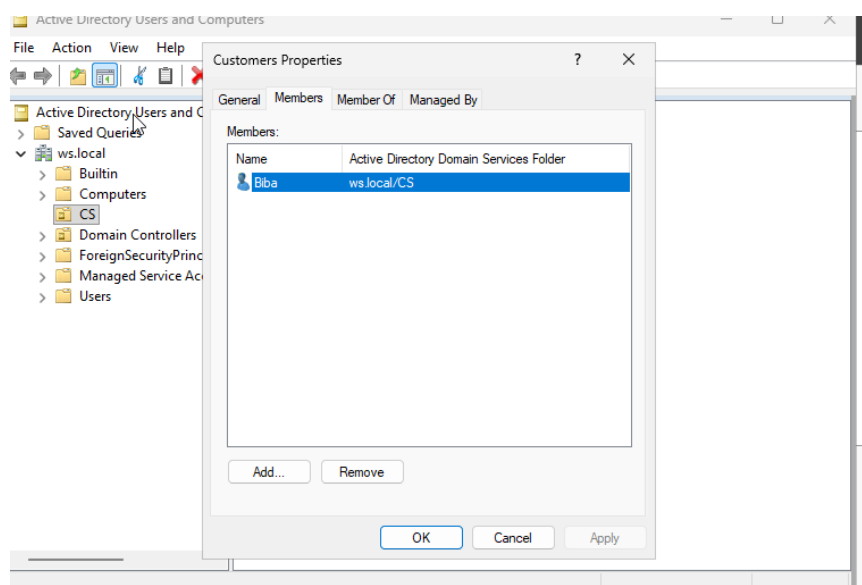

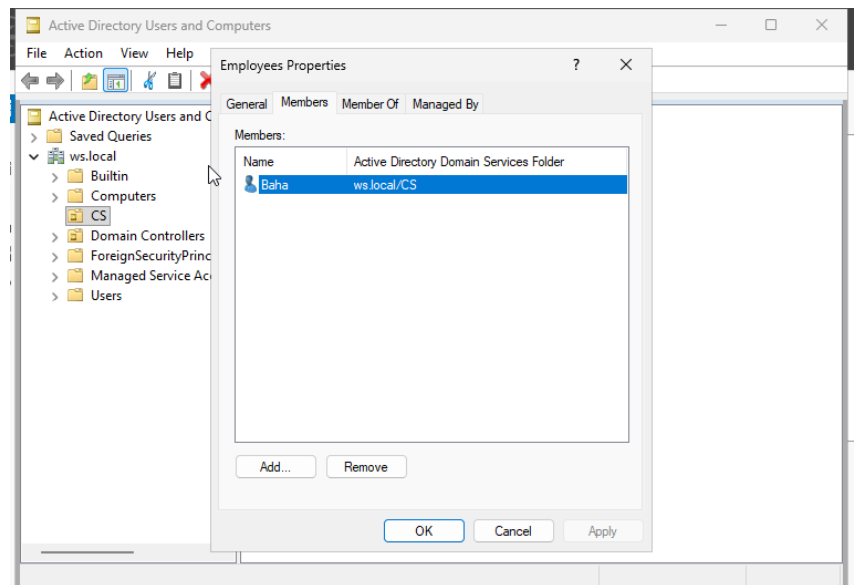

Then I created 2 users Baha and Biba

So I added my created users to log on locally both of them Baha and Biba.

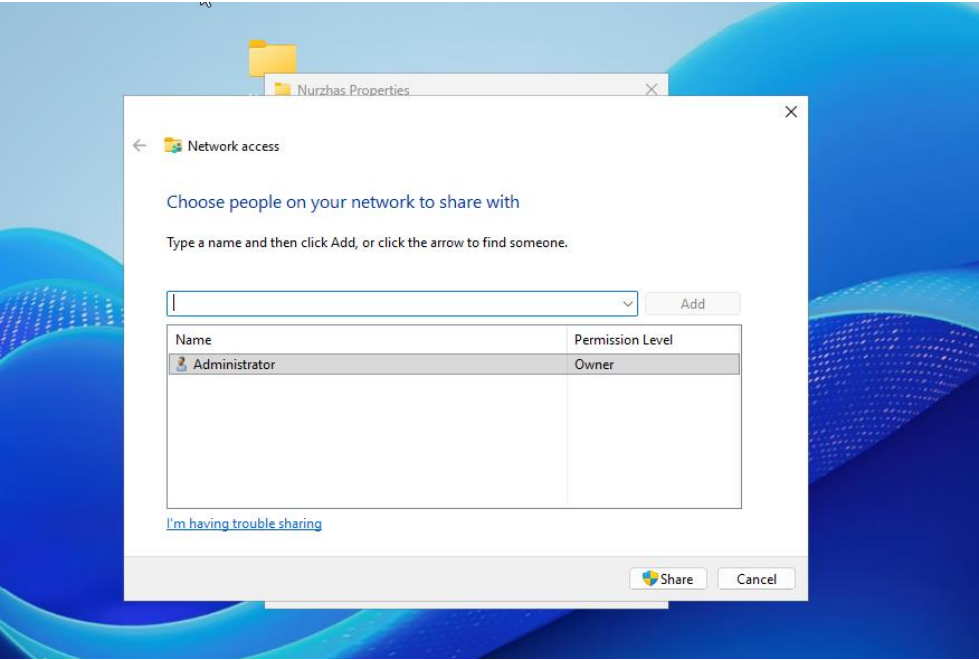

Then I added my 2 users into 2 groups that I have created

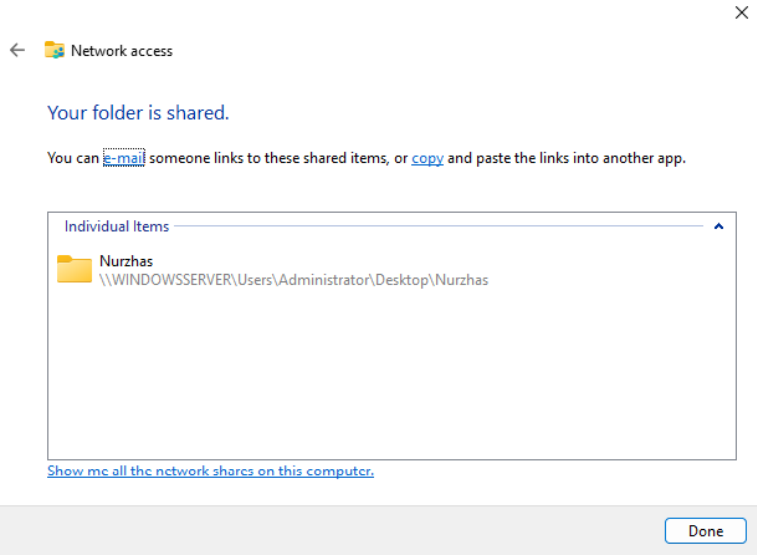

SHARE FOLDERS BASED ON GROUP POLICY PERMISSIONS.

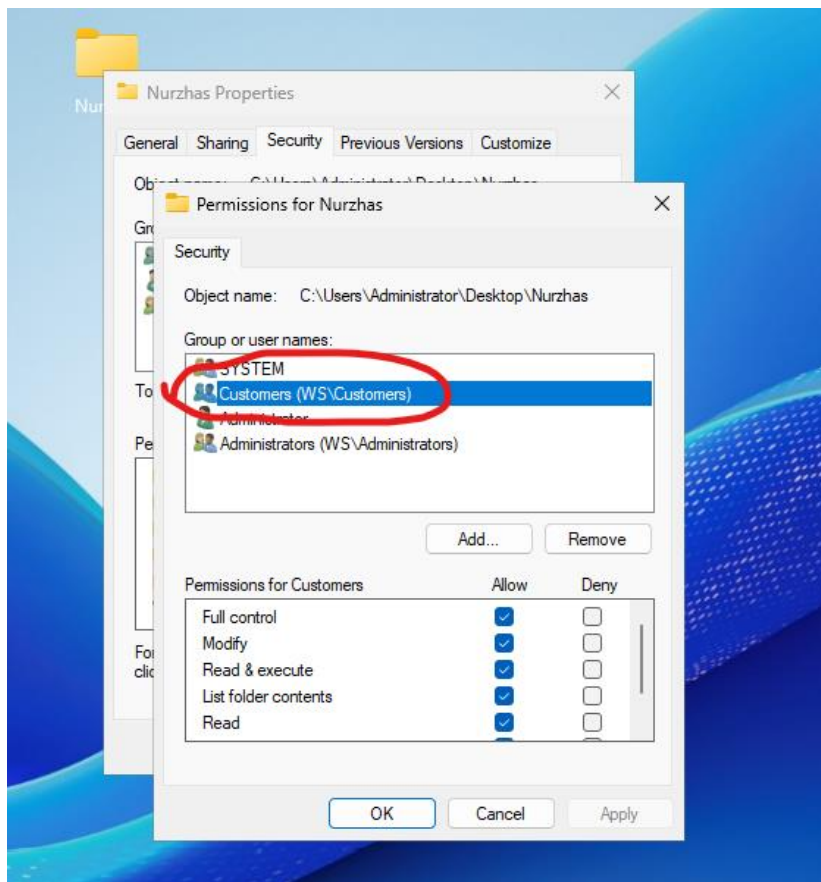

I created a folder named “Nurzhas” and check it’s sharing.

Then I have to memorize the path of my folder.

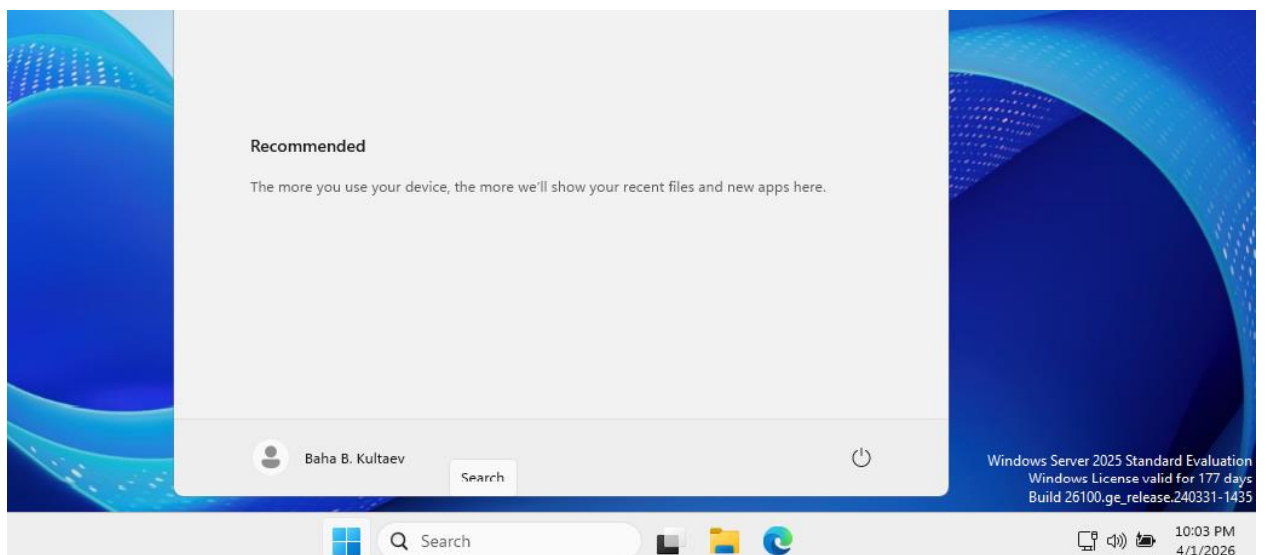

Next I added one of the groups and gave the necessary permission to the Group.

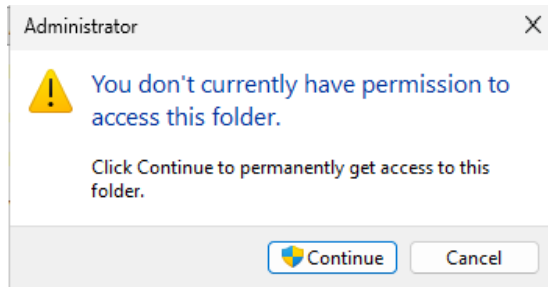

Test Access:

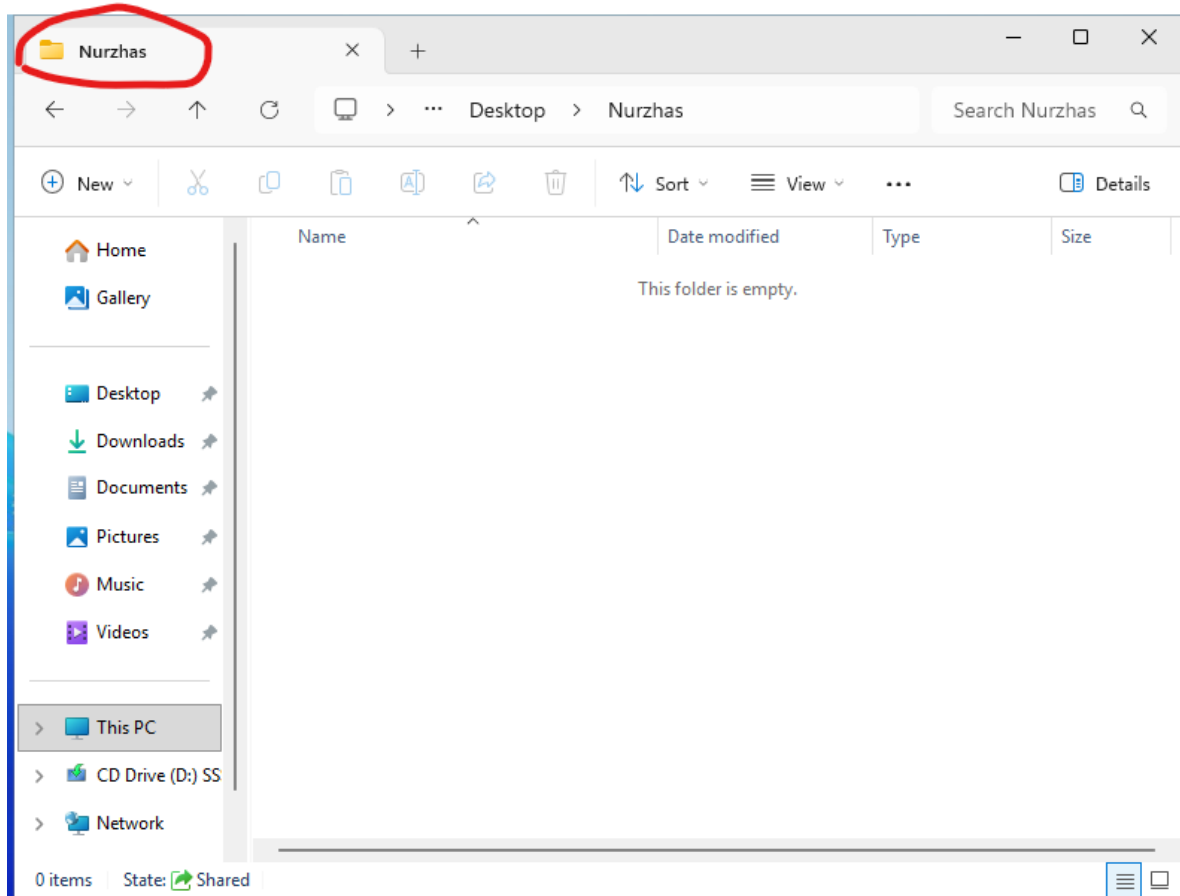

First I signed as Baha:

I tried to open the folder but couldn't because I don't have permission

Then I tried with Biba and I could access the folder

Describe what users can access the folder, and which one cannot:

The user who is in the Customers group can access the folder because permissions were given to that group. The user in the Employees group cannot access the folder because no permissions were assigned.

SET USER ACCOUNT LOGON HOURS IN ACTIVE DIRECTORY

First I selected my user:

Baha Properties

Member Of: Remote control, Remote Desktop Services Profile, COM+

General Address Account Profile Telephones Organization

User logon name: Baha @ws.local

User logon name (pre-Windows 2000): WS\ Baha

Logon Hours... Log On To...

☐ Unlock account

Account options:

- ☐ User must change password at next logon
- ☐ User cannot change password
- ☐ Password never expires
- ☐ Store password using reversible encryption

Account expires:

☒ Never

☐ End of: Friday, May 1, 2026

OK Cancel Apply Help

And Then entered the logon hours tab and change so that I can log only on Froday's and Saturday's:

Logon Hours for Baha

12 2 4 6 8 10 12 2 4 6 8 10 12

All

	12	2	4	6	8	10	12	2	4	6	8	10	12
Sunday													
Monday													
Tuesday													
Wednesday													
Thursday													
Friday													
Saturday													

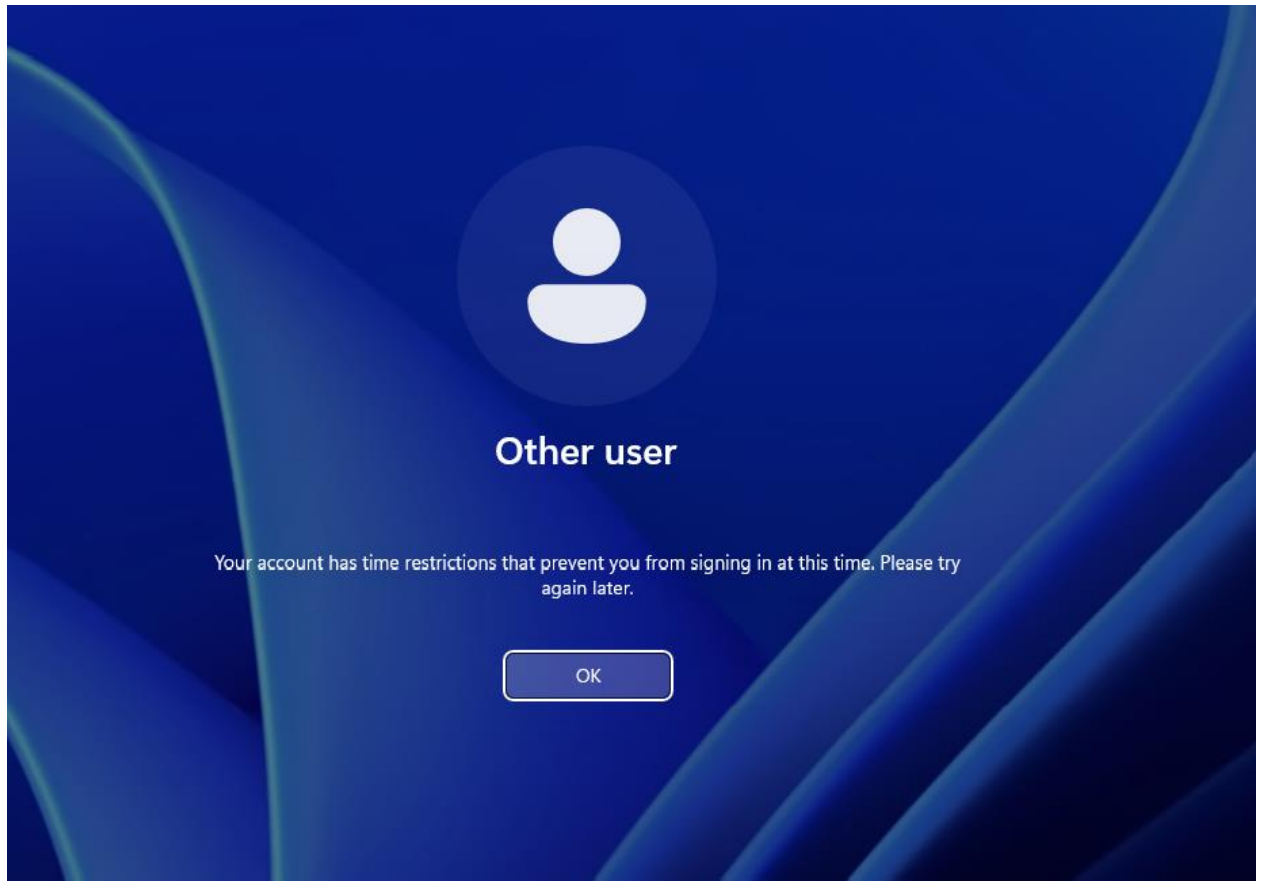

Logon Permitted Logon Denied

Saturday from 12:00 AM to 12:00 AM

End of: Friday, May 1, 2026

OK Cancel

Now I'm gonna check it:

All worked!

Were you able to log in?

The user can log in only on Friday and Saturday. On other days, login is denied because of logon hour restrictions.

Part 3.

1. Check which group policies are applied to the logged-in user through the command line (use the command gpresult). Check this information for the users which were created in this assignment and also for Administrator.

Biba:

```
C:\Users\Biba>gpresult /r

```

The **gpresult** command was used to check which Group Policies are applied to each user. The results show different policies applied depending on the user and group membership.

2. Deploy BgInfo to the server using Group Policy.

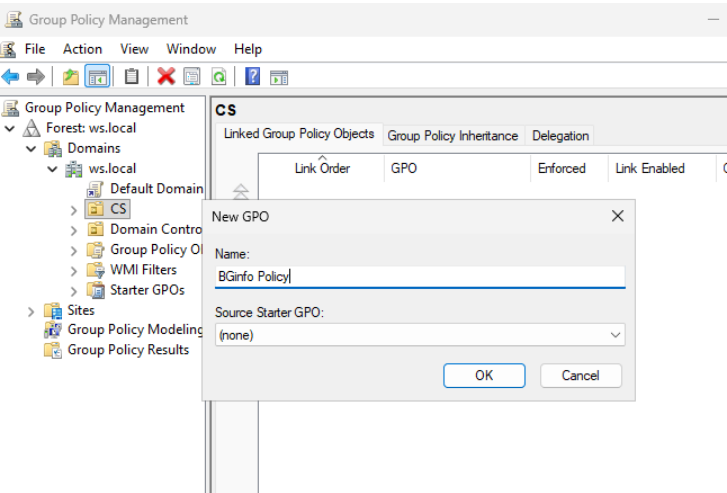

What is BGInfo?

BGInfo shows system info (IP, username, etc.) on desktop background.

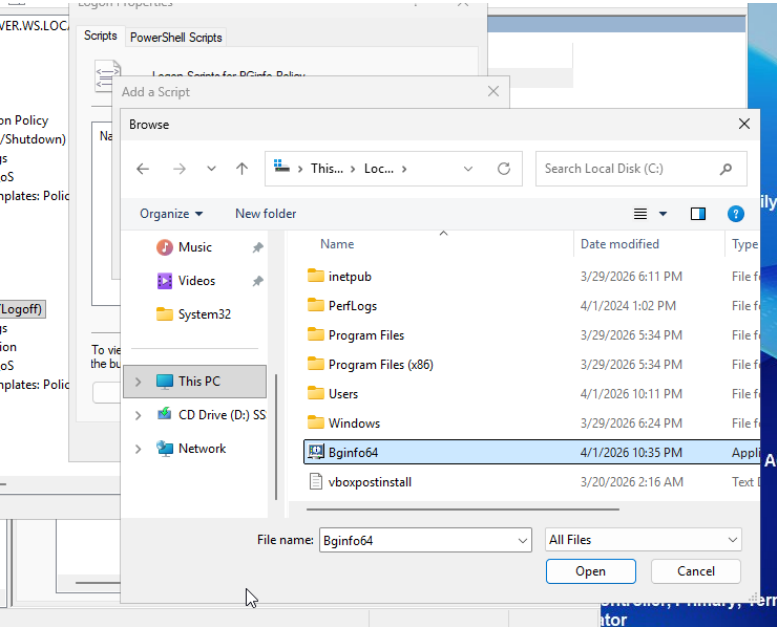

First I downloaded BGINfo.zip file

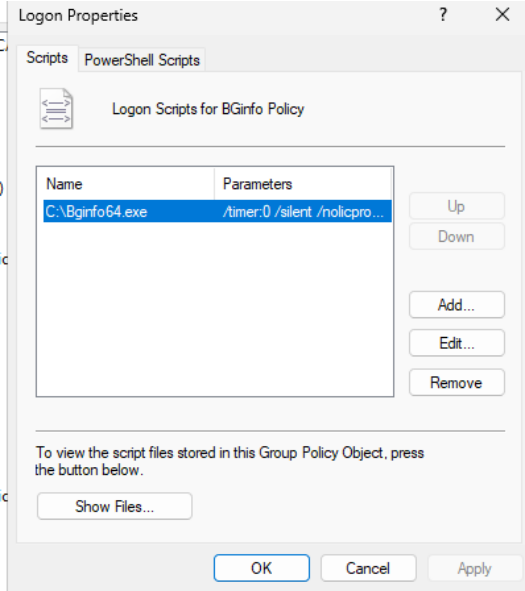

Creating new GPO:

Adding BGinfo to Server:

Successfully added it:

As you can see everything working I tested it logging via Biba:

Summary:

In this assignment, groups and users were created and organized in Active Directory. Users were added to different groups such as Employees and Customers. A shared folder was created and permissions were set so that only specific groups could access it. Logon hours were configured to restrict when users can log in. Group Policy was used to manage settings, and the gpresult command was used to check which policies were applied to each user.
